RESPONSIBLY MADE IN SWEDEN SINCE 1972

Woolpower is proof that a clothing company can offer reasonable wages, secure employment and a work environment where people are happy.

Our hometown Östersund is situated in Jämtland, northern Sweden; a region filled with vast mountains, forests and lakes. This is where you’ll find our factory and it’s where we developed our unique material for thermal undergarments and socks, Ullfrotté Original, back in 1972.

Woolpower is worn by people around the world in their daily lives, at work and for outdoor activities. People who don’t want to have to worry about whether their clothes will suit weather conditions and people who care about how their clothes are made.

For Woolpower, ethical and environmental thinking is a core value. The fact that we’ve chosen to go against the crowd and keep our production in Sweden means we can maintain control throughout the entire value chain, from the birth of the lamb and the production of the wool we use, to our manufacturing process and how we handle waste material. That’s uncommon in our industry.

This year we’ve updated our product names, as you’ll see later in this workbook. We’re also proud to introduce some new colors into our LITE collection and two fresh updates to our Color Collection.

There’s a nametag inside all Woolpower garments featuring the name of the seamstress who made it. It’s not only a mark of quality; it also shows how proud we all are at Woolpower of our company and our products. When you wear our clothes, you can be confident that they’ve been made responsibly, with consideration for the environment and the workplace of all those who work for Woolpower.

In a nutshell, Woolpower garments are responsibly made in Sweden.

A warm welcome from Woolpower.
WOOLPOWER
QUALITY IN EVERY SENSE

Woolpower is living proof that a clothing company can provide reasonable salaries, safe employment and a working environment that people enjoy being in. Ever since our factory opened in Östersund in 1972 all our garments have been sewn here. That’s how we want it to be so that we can maintain the highest quality possible.

CIRCULAR KNITTING
Each year, around 200 tons of Merino wool yarn are delivered to the factory in Östersund. This is where the knitting starts. When we make our Woolpower garments we use circular knitting machines to produce the sleeves, legs, body and socks. Using this technology means that garments have the minimal amount of seams for the best durability and comfort.

OUR EXPERIENCED SEAMSTRESSES
At Woolpower one seamstress is responsible for sewing an entire garment, from the very first to the very last stitch. This makes her work more varied and develops her workmanship. Once the seamstress completes a garment and approves it, she attaches a label with her own name on it. This label is her – and Woolpower’s – seal of quality.

A WARM COMPANY
You could say that warmth is doubly our thing. We make warm woolen products, and also aim to be a warm company that takes the utmost care of its employees, partners, animals and the environment.

SUSTAINABILITY
Having our own factory in Östersund gives us a great opportunity to work on our environmental footprint. During recent years we’ve taken another important step towards our sustainability goals. Waste fabric from our production line now gets recycled into our popular Felt Insoles and Slippers. Our production is certified in accordance with ISO standards. The material Ullfrotté Original is certified by Oeko-tex, an international human-ecology label that shows that the garments contain no toxic or harmful substances.
NAME: Emelie Dillner  
OCCUPATION: Seamstress  
Has been working at Woolpower in Östersund since 2007  
"I am proud to be a part of the Woolpower team. I have the last word when it comes to approving a garment. That's something I feel totally comfortable with since I've sewn the whole garment myself."
ULLFROTTÉ ORIGINAL
DESIGNED TO LAST

The unique Ullfrotté Original material was developed in collaboration with the Swedish military in the early 1970’s. The result was a garment with great insulation properties and unique moisture management. It’s a wear-resistant fabric that actually makes you feel warm and dry even when moist.

SYNTHETICS ADD STRENGTH
Merino wool is a material that has excellent temperature regulation properties, but its wear resistance is not optimal. To bolster Ullfrotté Original’s wear resistance, the Merino wool is mixed with one-third synthetics. This gives the garment the strength needed to meet the high quality standards of Woolpower.

TERRY LOOPS TRAP THE AIR
Ullfrotté Original is knit so that one side of the fabric is flat and the other has smooth terry loops. It is the terry loops in combination with the loose knit wool fibers that make our garments capable of trapping such a great amount of air. Up to 80 percent of Ullfrotté Original actually consists of air. The terry surface also offers the benefit of moving moisture away from the skin.

WASH LESS OFTEN
Wool is self-cleaning and does not retain odor even after long periods of use. This means that you do not have to clean your Ullfrotté garments that often. However, if needed, Woolpower garments can be machine washed at 60 °C (140 °F)* and tumble-dried at medium heat.
MERINO WOOL
A REMARKABLE MATERIAL

Temperature regulation is one of the most important functions in comfortable underwear. Wool has remarkable characteristics that no science lab has yet been able to replicate synthetically. In all Woolpower garments we use Merino wool, a perfect fiber to insulate against both heat and cold.

TOGETHER WITH OUR SUPPLIERS
We purchase our Merino wool from the Patagonian part of Argentina and Uruguay. There, we have a constant dialogue with our suppliers about animal treatment and the sheep farmers’ impact on the environment. Of course, we only use guaranteed mulesing-free wool.

WOOL FOR INSULATION
Merino wool is the perfect material to use when you want to stay warm. The secret is in the air; the more air you can trap around the body, the more heat you can retain. And the crimping of the wool fiber traps large quantities of air. Merino wool has up to 40 creases per centimeter, which provides a remarkably high degree of insulation.

WARM EVEN WHEN MOIST
The natural wool fiber also works together with your body when you get wet. Wool can absorb up to 30 percent of its dry weight in moisture without feeling damp. So it keeps you warm – and it also transports moisture away so that you feel warm and dry for longer.

NON-ITCHY THICKNESS
The quality of wool is measured in microns. Fine quality wool is between 17 and 23 microns; this is when wool is perceived as soft and non-itchy. The Merino wool used in our own Ullfrotté Original material is 22.5 microns, resulting in a comfortable, non-itchy material that is still thick enough to not break easily.
CLOTHES DON’T PROVIDE HEAT
BUT YOUR BODY DOES

A SYSTEM FOR HEAT REGULATION
When the weather is cold, the best way to stay warm is by following our layering system. Layered clothes help you retain your body heat. At the same time they transport away moisture and the excess heat that your body doesn’t need.

CHOOSE THE RIGHT THICKNESS
Woolpower has developed an entire collection of garments for the whole body that can be combined differently depending on the temperature and form of activity. Our fabric, Ullfrotté Original, is produced in varying thicknesses for different functionality and benefits. The thickness of the material is measured in grams per square meter: 200, 400 and 600 g/m²

DID YOU KNOW?
Staying warm and dry significantly increases your level of safety. The brain is affected negatively by the cold. Being wet and cold doesn’t help you make the best decisions. That’s when things can get dangerous.
1

200
FOR UNDERWEAR

Start with a heat-insulating and moisture-transporting undergarment closest to your body.

Ullfrotté original 200 g/m² keeps your body at just the right temperature and also helps remove moisture at the same time.

All Woolpower’s 200 g/m² garments are circular knit, which means they don’t have any uncomfortable seams that can chafe and break.

2

400-600
FOR INSULATION

Add one of Woolpower’s tighter-knit Ullfrotté garments as a mid-layer to increase insulation between the base layer undergarment and your wind and water resistant outer layer.

Mid layer garments are often used in colder temperatures and at less strenuous activity levels.

Woolpower makes these in 400 and 600 g/m².

3

Layer 3 should be a wind and water resistant outer shell that protects you against external cooling and keeps your heat trapped between the base and mid-layers.

4

A wind-proof outer layer made with down or a synthetic insulator is easy to put on and take off over your shell. It’s useful for breaks.
WOOLPOWER
LITE

BASE LAYER

The Woolpower LITE product line was launched to meet the market demand for a thinner, cooler alternative to Woolpower’s Ullfrotté Original. It was an instant success and this year we’ve come up with two new colors! XXXX XXXX and XXXX XXXX. The new colors will turn the collection into a more versatile garment.

The LITE fabric is flat-knit which gives more direct contact against the skin than Woolpower’s Ullfrotté Original fabric. That means heat is conducted more easily from the skin and out through the garment. This in turn makes the LITE products perfect as a cooler alternative, for high-level activity and/or warmer temperatures. Woolpower LITE stretches the season for Woolpower garments, and can be used all year around.

A 19.5-micron merino wool is combined with 20% polyamide fiber to create a stronger and more durable garment. Function remains the primary focus. There are no more seams than absolutely necessary and the 1:1 rib knit fabric is very soft, smooth and stretchy.

LITE still provides insulation, but more importantly its Merino wool adapts to temperature and activity level.

This is our thinnest undergarment in terry-knit Ullfrotté Original. Every garment is made from different sizes of tubes, which means that we have minimized the amount of seams. This creates a garment that is more durable and with less chafing from seams.

The garment is designed to be worn next to the skin as a moisture wicking base layer. The terry loops and the overall loose knitting gives unique insulation compared to the fabric weight.

By wearing the 200 g/m² base layer closest to the body you will benefit from all the best functions terry loop wool garments provide: insulation, perspiration transport and comfort.

It is also great in combination with Woolpower LITE.
DID YOU KNOW?
Water conducts heat 25 times more effectively than air does. That’s why it’s so important to remove moisture away from your skin. When wool transports moisture away from the skin it creates ‘absorption heat’. This is when heat energy is released as water molecules and the fiber’s molecules collide. The process continues until the fiber is saturated with water molecules.
TEE 200  
Art no: 7102  
Short sleeve crewneck made of a circular knit fabric with terry loops and has no lengthwise seams. Cuffs are knitted in.

CREWNECK 200  
Art no: 7112  
Long sleeve crewneck made of circular knit fabric with terry loops and has no lengthwise seams. The back is longer to prevent gaps. Cuffs are knitted in.

ZIP TURTLENECK 200  
Art no: 7222  
Long sleeve turtleneck is made of circular knit fabric with terry loops and has no lengthwise seams. It has a short zipper for ventilation. The back is longer to prevent gaps. Cuffs are knitted in.

LONG JOHNS WITH FLY 200  
Art no: 6342  
Long Johns are made of circular knit fabric with terry loops and have no lengthwise seams. A gusset in the back ensures optimal comfort. Cuffs are knitted in. With fly.

LONG JOHNS 200  
Art no: 7342  
Long Johns are made of circular knit fabric with terry loops and have no lengthwise seams. A gusset in the back ensures optimal comfort. Cuffs are knitted in.

ONE PIECE SUIT 200  
Art no: 7382  
One piece suit has crewneck and a full front two-way zipper. The garment is made of circular knit fabric with terry loops and has no lengthwise seams in body and arms. The cuffs are sewn in.

MID LAYER

These thicker garments are used as mid layers to increase insulation between the base layer and the wind and water resistant outer layer.

The mid layer garments are usually used at lower temperatures and lower activity levels.

The standard mid layer jackets are longer in the back and in the cuffs, which also have thumb-holes.
DID YOU KNOW?
Something else that's unique about wool garments is that they don’t need frequent washing. Wool does not easily hold odors because it contains a substance called creatine that naturally breaks down bad smelling bacteria. So just air the garments out and they will quickly feel fresh again.
FULL ZIP JACKET 600  
Art no: 7236
Full zip jacket has a high collar, cuffs with thumb holes and a full length zipper. It is made of circular knit fabric with terry loops. The back is longer to prevent gaps.

COLOR
COLLECTION

Color Collection is a mid layer range with the very same focus on functionality as our standard models.

What’s different is that the garments in this range come in colors that may vary over time.

This year we have two new colors in our collection: Grey/Pink and Dark navy/Light Blue.

The design of the garments is also slightly different. Unlike our standard models, the jackets in Color Collection are not longer in the back and have solid cuffs without thumb holes.

The active life of children requires clothes that are soft to wear, fully flexible and resistant to wear-and-tear.

Woolpower’s range of clothes for children is made of the same fabric as the adult clothing – Ullfrotté.

Combine these warm garments with Woolpower felt insoles made of our production waste, to make sure the kids feel warm and comfortable on their adventures.

The soft and timeless colors can be combined in many ways.

All garments for children are available in sizes 86 – 140 cm long.

SOCKS

Woolpower has been making socks for different temperatures, activities and situations since the early 70’s. This continued experience and deep knowledge about how important it is to have dry and warm feet is reflected in our wide range of products.

Keeping your feet warm and dry is essential to staying comfortable. Whatever your needs, Woolpower’s sock range keeps your feet in the best shape possible, all year around.

Woolpower makes socks in 200–800 g/m² terry-knit fabric and socks in a flat-knitted fabric called LITE. Both knitting techniques create fabrics that provide excellent insulating functionality and retain warmth even when wet. The fabrics absorb and move perspiration away from the skin while still keeping you warm. They also contain polyamide, which increases shape stability and durability.

Note that we have updated the product names this year. However, the knitting techniques and socks are still the same as before. The new names better link our clothes and our socks.

ACCESSORIES

The unique Woolpower Ullfrotté Original fabric is useful in so many ways and situations.

Our range of accessories, for example, fills the need to keep smaller body parts warm.

Keeping hands and heads warm is particularly important to maintain the body’s right temperature balance.
